Bredband2 Växel
FW SIP Växelanslutning

SIP Proxy's which handles the signaling. (Src.port on these will always be 5060). But destination port(src.port on customerside is depending on behavior in FW.

79.138.0.98
79.138.0.130

These IP-adresses below will send RTP traffic (UDP) and src.port is between 35000-65000. Dst.port(src.port) on "your" side is based FW and the equipment behind.

79.138.0.98
79.138.0.102
79.138.0.103
79.138.0.130
79.138.0.135
79.138.0.136
77.53.0.2
77.53.0.3
77.53.0.4
77.53.0.5

If possible the easiest solution would be if you could just allow return traffic on established port/sessions
